## Happy New Year 2021!!

We all have been looking eagerly to 2021 and finally it's here. Beginning of every year we roundup the bygone year with mixed experiences, challenges and emotions. But this year the challenges and struggles have outweighed the fond memories we would like to cherish. For us, 2020 was all about adapting to the new normal and embracing the changes it brought along. There was a paradigm shift in terms of doing business. Digitization gained precedence over human involvement and it was a major change for manufacturing industries. But we all quickly got acclimatized to conducting business successfully via virtual meetings and conference calls.

At Woodfield, we believe in making most of the opportunity and likewise we all dedicated the time we had in hand, in the midst of movement & transportation restrictions, by developing new products, running trials and testing the upper limits of each incubated product. In 2021 we will be launching multiple products and taking on new exciting opportunities to expand our business.

As a company, our staff, showed extraordinary courage to fight back the challenges 2020 threw at us. We wouldn't have been standing strong without their relentless efforts to keep the business moving forward. All Woodfield family members present across globe fought back against all odds while keeping the hope alive to get back to our feet at the earliest. On the same note, I can't thank their family members enough for their encouragement and support.

A heartfelt thanks to our distributors and partners globally for their continued support during such tough times. Having business companions like you by our side gives us the winning edge and keeps pushing us to do better.

Last but not the least, we are truly grateful to our customers for their trust and confidence in WSI. We wouldn't have been up and running in this speed without the constant encouragement from you. We promise to keep delivering the best in quality products to help make your business profitable and sustainable.

We are starting this year with optimism and determination to do better. We are now fully operational and working at full capacity to make up for the lost time. We are also hopeful that the vaccine will start to make inroads against the pandemic ensuring minimal restrictions for everyone. Till then let us all stay vigilant and be safe.

## Woodfield successfully completes a project in Poland for pneumatic folding stairs

Woodfield designed and manufactured pneumatic folding stairs for a very well-known Polish company. This Pneumatic folding stair has a safety cage, balustrade arrangement and its mounted on the sides.

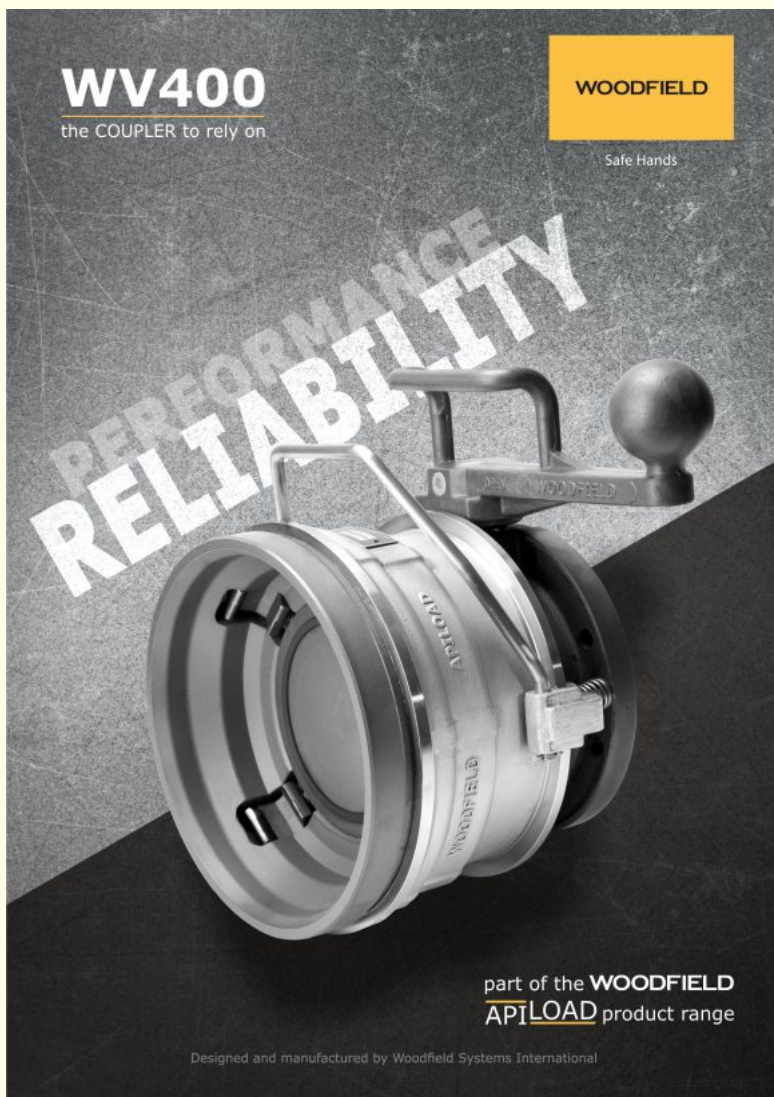

Following are the key features of the pneumatic folding stairs supplied in Poland:

- Self-supported design with HD safety chains
- Working load capacity of 230kg
- Self-leveling non-slip step treads
- Mid rails and toe rails
- Standard foot lock
- Easy grab operating handles
- Easy adjust tension springs assist movement
- Extra length end step
- Padded leading edge to help protect top of vehicle

## Woodfield launches WV400 coupler, a new addition to the APILOAD product range

Woodfield is proud to announce the launch of our new API coupler, the WV400. Based on our guiding principles of safety, quality, delivery, and cost: the WV400 is the latest addition to Woodfield's APILOAD family of products.

Designed for rigorous usage, the WV400 is built to withstand extreme working conditions. The stainless-steel outer sleeve offers long life performance, while the one-piece handle and removable pin system provides easy infield tear down when seal maintenance is required. When paired with a Woodfield Systems APILOAD bottom loading arm, plus the "uni-seal" swivel joint system, the operational performance and simple maintenance friendly features make the WV400 The Coupler to Rely On.

The WV400 has proven its leak free functionality by successfully exceeding 180,000 real world operational cycles, and is backed by a 3 year Woodfield product warranty. Contact your local Woodfield representative for sales worldwide.

## Woodfield loading arms have proved to be an effective solution for bulk transfer of cosmetic products

Woodfield has perfected the technology of designing, engineering & manufacturing custom-made loading arms for various applications. Clients from all over the world have been reaching out to our experts to supply a wide array of loading arms to suit critical as well as hygienic applications for food & personal care products. Our office & manufacturing unit in South Carolina

(Woodfield systems USA Inc) successfully completed this project in the USA for a renowned cosmetic giant.

Woodfield has designed, manufactured and commissioned a stainless steel truck bottom unloading arm with 4" steam jacket and full arm insulation for this client to enable delicate handling and heating. This bottom unloading arm is fitted with WSS swivel joints for safe and easy movement during operation. This product has also been equipped with Dry Break Coupler to avoid accidental spillage of product. The complete package is mounted on its own stand post. The solution was offered by our distribution partner Hatfield and Company. After listening to the requirements of the end user and the engineering company, a complete solution was presented and accepted by the client, and is now in operation.

## **Need a technology for bulk transfer of chocolate? Woodfield has a proven solution for you.**

Woodfield has designed, manufactured and supplied a jacketed loading arm for one of the top global manufacturers of high quality chocolate & cocoa products. This product was delivered at customer's project site in India that caters to all parts of the country.

The Woodfield jacketed loading arm fulfilled the customers key requirement of food safety, hygiene & faster loading to despatch the product. Our loading arm enabled on-time delivery of chocolate & cocoa products all across India for Ice-cream, Cakes and Chocolates while maintaining the required hygienic conditions.

Woodfield team took up this challenge to ensure the highest quality standards while following stringent requirements to meet and exceed directives 80/590/EEC & 89/109/EEC, use of food grade lubricants & latest editions of food safety & food hygiene with ISO quality assurance standards.

## Woodfield now offers Marine Loading Arms

Woodfield Systems International (WSI) is now offering Marine Loading Arms (MLA) as a part of their product portfolio. WSI Marine Loading Arms are cost effective and best in quality and now are available to clients across the globe.

With decades of experience in oil & gas and chemical industries, Woodfield's robust Marine Loading Arms are specifically designed for loading or unloading products such as Crude Oil, Petroleum and refined products, Chemicals, Liquefied petroleum Gas (LPG), Liquefied Natural Gas (LNG). Our Marine Loading Arms sizes range from 4" to 20" diameter.

Woodfield Marine Loading Arms are manufactured using Carbon steel / Low Temperature Carbon Steel/Stainless steel. They are designed with self-supported product pipe (Ambient loading arms) and structurally supported.

With Woodfield you are in SAFE HANDS. Stay SAFE in 2021
